Document 1: US 2002/0173579 A1 (Bayer Aktiengesellschaft), 21 November 2002

Claims 1-8

The inventions described in claims 1-8 appear to involve an inventive step over document 1 cited in the ISR.

Document 1 has no description of subjecting an aqueous colloid dispersion of an intrinsically conductive polymer to an ion-removing treatment by the use of a liquid permeation method, and substituting an organic solvent for the water of the above aqueous colloid dispersion, whereas, due to the above, the invention of the present application demonstrates favorable effects such as producing an organic solvent dispersion of an intrinsically conductive polymer containing no more than 1% water.

Claims 9-11

The inventions described in claims 9-11 appear to involve an inventive step over document 1 cited in the ISR.

Document 1 has no description of the feature that an organic solvent dispersion of an intrinsically conductive polymer contains no more than 1% water, whereas, due to the above, the invention of the present application demonstrates a favorable effect such as providing a simply composed coating film having properties of an intrinsically conductive polymer.
